Accessibility for Americans with Disabilities Act (ADA) application compliance requires all public and (large) private organizations to make their applications and web content conform with mandatory accessibility standards (WCAG 2.2). WCAG is simply a set of formal guidelines on how to develop accessible web content. These standards represent a higher level of accessibility than 508 standards, although they are identical or very similar. WCAG focuses primarily on HTML accessibility.

Evaluation Methods Used:

The product was tested against all of the applicable 55 success criteria within the Web Content Accessibility Guidelines (WCAG) 2.2 Conformance Level A and AA. The testing methodology included a combination of automated testing, manual testing conducted via paired testing methodology involving two testers, one of them is a non-sighted and the other is a sighted accessibility expert. This testing methodology ensures that every aspect related to accessibility and user experience is included in our analysis. Below is a list of some of the technologies and environments used:
